Task – 1 # Variables and data types

1. Write a Python program to create a variable name and print your name.
2. Write a program to create an age variable and print your age.
3. Write a program to store two numbers in variables and print their sum.
4. Write a program to store two numbers and print their difference.
5. Write a program to store two numbers and print their product.
6. Write a program to store two numbers and print their division result.
7. Write a program to calculate the area of a rectangle using variables length and breadth.
8. Write a program to calculate the perimeter of a rectangle.
9. Write a program to calculate the area of a circle using a variable radius.
10. Write a program to convert Celsius temperature into Fahrenheit.
11. Write a program to store a student's marks in 5 subjects and calculate the total.
12. Write a program to calculate the average of 3 numbers.
13. Write a program to convert meters into centimeters.
14. Write a program to convert kilometers into meters.
15. Write a program to calculate simple interest using principal, rate, and time.
16. Write a program to swap the values of two variables.
17. Write a program to take the user's name as input and print "Hello, <name>".
18. Write a program to take two numbers as input and print their sum.
19. Write a program to take a person's age as input and print the age after 5 years.
20. Write a program to take the length and breadth of a rectangle from the user and calculate its area.
21. Write a program to check and print the data type of a variable.
22. Write a program to create an integer and convert it into a float.

23. Write a program to create a float and convert it into an integer.
24. Write a program to convert a string "123" into an integer.
25. Write a program to convert an integer into a string.
26. Write a program to create variables of type int, float, str, and bool, and print their types.
27. Write a program to take a number as input and print its square.
28. Write a program to take a number as input and print its cube.
29. Write a program to calculate the total price of 3 products using three variables.
30. Write a program to take a student's name and marks in 3 subjects, then print the name, total marks, and average marks.
